Auckland, New Zealand | New Zealand citizen

EDUCATION

Auckland University of Technology | 2025 to 2027 | GPA 7.83 out of 9
Bachelor of Computer and Information Sciences
Major in Computer Science | **Minor** in Artificial Intelligence
Find Your Greatness Scholarship recipient for academic achievement and leadership

PROJECTS

Studdy | Multi Tutor Learning and Booking Platform

Independent product | 2026 to present

- Built Studdy after repeatedly running into problems with scheduling, communication, payments and lesson management in my own tutoring business. The platform brings tutor discovery, booking, lessons, payments and parent, student and tutor workflows into one system.
- Tested early versions with parents before launch and continued gathering feedback from parents and students during real use, then changed navigation, booking and communication flows based on what they found confusing or wanted to do differently.
- Evaluated planned video and AI features against cost, technical effort and user value. Kept simpler workflows where they solved the problem well and moved more expensive features into the future roadmap.

Stack: TypeScript, React, Next.js, Supabase, PostgreSQL, OAuth, Stripe, APIs, GitHub and Vercel

Matryoshka | Live Event Food Ordering Platform

Independent stakeholder project | 2025

- Designed and delivered an online ordering and payment system within one month after working with the event organiser to define requirements and replace an impractical manual ordering process.
- Supported advance ordering for around 200 customers and three chefs, processing real payments through Stripe during a live event.
- Used Google Sheets for chef order management rather than building a separate chef portal, allowing the customer ordering and payment flow to be completed within the one month deadline.

[GitHub](#) - Demo in Progress

UniOS | University Study Organisation Platform

Independent product | 2026 to present

- Started UniOS because the study tools I was using could store tasks and deadlines but still did not help me answer the question I struggled with most: what should I work on next?
- Designed the system around courses, assessments, tasks and priorities using TypeScript, Vue 3, Nuxt 3, Tailwind, Supabase and PostgreSQL.
- Chose manual course entry over automatic importing after considering cost, complexity and how I actually use the product. Entering course information myself keeps upcoming work visible instead of hiding it in background automation.

PRODUCT & TECHNICAL SKILLS

Product and design:

Figma, prototyping, user flows, journey mapping, usability feedback, requirements, feature planning

Development: TypeScript, JavaScript, Python, Java, React, Next.js, Vue, Nuxt, SQL, Supabase, PostgreSQL

Tools: Git, GitHub, Vercel, REST APIs, OAuth, Stripe, Google Calendar API

EXPERIENCE

Private Mathematics Tutor | Self Employed

Auckland and online | January 2025 to present

- Run an independent tutoring practice supporting 6 to 10 students each week across Years 3 to 13, including NCEA assessment and examination preparation.
 - Manage scheduling, parent communication, lesson planning and student progress independently while adapting lessons to different ages, abilities and learning needs.
-

ADDITIONAL EXPERIENCE

Mission Ready Accelerator | Full Stack Developer | 2026

- Worked in a development team to build a role based learning platform with separate teacher and student accounts, profiles, homework and task management.
-

LEADERSHIP AND AWARDS

Interact Rotary leadership

Table tennis coaching and mentoring

Service Excellence awards for

tutoring, leadership and volunteering
